**Exercises** 

## The Natural Numbers (P4)

#### **Definitions**

- 1. greater than (or equal to)
- 2. exact division
- 3. odd & even
- 4. prime

#### Question

Prove that every natural number is either even or odd and not both.

## Uniqueness of Odevity (P4)

#### Proof.

Suppose that  $n \in \mathbb{N}$ ,

- 1. prove that if n is odd, n cannot be even
- 2. prove that if n is even, n cannot be odd
- prove that n cannot be neither odd nor even (Do not forget!)

#### Proof.

Suppose that  $n \in \mathbb{N}$ ,

- 1. prove that if n is not odd, n must be even
- prove that if n is not even, n must be odd
- prove that n cannot be both odd and even (Do not forget!)

### **Propositions**

### **Definition** (P2)

- Declarative
- One can tell true (T) or false (F) immediately

#### Logic operations

- ▶ unary operation: ¬(negation)
- binary operations: ∨(disjunction), ∧(conjunction), ⇒(implication), ⇔(biconditional/equivalence)

## Negation (P7)

$$\begin{array}{c|c} A & \neg A \\ \hline T & F \\ \hline F & T \\ \end{array}$$

## Conjunction (P8)

Α	В	A∧B
Т	Т	Т
Т	F	F
F	Т	F
F	F	F

## Disjunction (P9)

Α	В	$A \lor B$
Т	Т	Т
Т	F	Т
F	Т	Т
F	F	F

## Implication (P11)

Α	В	A⇒B
Т	Т	Т
Т	F	F
F	Т	Т
F	F	Т

## Biconditional (P13)

Α	В	A⇔B
Т	Т	Т
Т	F	F
F	Т	F
F	F	Т

## Precedence of Logical Operators (DMA P11)

#### **TABLE 8**

Precedence of Logical Operators.

Operator	Precedence
Г	1
^ V	2 3
$\overset{\rightarrow}{\leftrightarrow}$	4 5

## Logical Equivalence

#### **Definitions**

- 1. tautology (P10)
  - A compound expression that is always true.
- 2. contradiction (P10)
  - A compound expression that is always false.
- 3. logical equivalence (P14)
  - The biconditional of two propositions is tautology.

## Logical Equivalence Examples

1. De Morgan Rules (P14)

$$\neg (A \lor B) \equiv (\neg A) \land (\neg B) \qquad \neg (A \land B) \equiv (\neg A) \lor (\neg B)$$

2. Contraposition (P15)

Α	B	¬A	¬B	A⇒B	¬B⇒¬A	$A \Rightarrow B \Leftrightarrow \neg B \Rightarrow \neg A$
Т	Т	F	F	Т	Т	Т
Т	F	F	Т	F	F	Т
F	Т	Т	F	T	Т	Т
F	F	Т	Т	Т	Т	Т

3. Other Logical Equivalences (P18-P20)

## Tips for Logic Operations

### Usages

- 1. Express some operation with other operations **e.g.** Prove that  $\neg(A \Rightarrow B)$  is equivalent to  $A \land \neg B$
- 2. Prove tautologies/contradictions without truth tables **e.g.** Prove that  $(A \land B) \Rightarrow (A \lor B)$  is a tautology.

### Comparison

- ▶ Truth table
  - 1. High effiency for no more than 2 prositional variables
  - 2. Low effiency when it comes to 3 or more propositional variables
- Logical equivalence transformation
  - 1. Practice & familiarity required

### **Arguments**

### **Definitions** (P27)

- 1. arguments
- 2. premise
- 3. conclusion

### Rules of Inference (P34-P38)

- 1. Hypothetical Syllogisms
- 2. Disjunctive and Conjunctive Syllogisms
- 3. Simple Arguments

## Validity & Soundness (P39)

#### **Definitions**

- 1. *validity*: True premises leads to true conclusion. (Conclusion does not need to be true if premises are not true.)
- 2. *soundness*: All premises are true. (Only deals with truth of premises.)
- **e.g.** Example 1.22 (P39)

When deal with practical proving questions

- 1. Valid & Sound
- 2. Contraposition

### Predicate

#### **Definitions**

- 1. predicate: Declarative sentence involving variables.
- 2. arity: number of distinct variables in the predicate.

Difference between Predicates and Propositions:

e.g.

- x > 5 is not a proposition. (we cannot tell the true or false immediately because the value of x is unknown)
- x+y<5" is a binary predicate.

### **Predicate**

 $\begin{array}{c} \text{Predicates} \xrightarrow{\text{bound with quantifiers}} \text{Statements} \\ \hline \\ \text{replace variables by constants} \end{array}$ 

### Logical Quantifiers

### **Definitions** (P22)

- 1.  $\forall$ : for all...
- 2. ∃: there exists···

### Hanging Quantifiers (P23)

Appearing at the back is equivalent to appearing just before the expression.

Contraposition of Quantifiers (P24)

$$\neg((\exists x \in M)A(x)) \equiv (\forall x \in M)\neg A(x)$$

$$\neg((\forall x \in M)A(x)) \equiv (\exists x \in M)\neg A(x)$$

Passing negation symbol in quantifier statements from the very left to the very right. (P28)

## Vacuous Truth (P25)

#### **Definition**

- ▶ Apply only for universal quantifier ∀
- ▶ Domain  $M = \emptyset$
- ightharpoonup Regardless of A(x) being true or false

A universal statement is true unless there is a counterexample to prove it false.

## Nesting Quantifiers (DMA P60)

TABLE 1 Quantifications of Two Variables.			
Statement	When True?	When False?	
$\forall x \forall y P(x, y) \forall y \forall x P(x, y)$	P(x, y) is true for every pair $x, y$ .	There is a pair $x$ , $y$ for which $P(x, y)$ is false.	
$\forall x \exists y P(x, y)$	For every $x$ there is a $y$ for which $P(x, y)$ is true.	There is an $x$ such that $P(x, y)$ is false for every $y$ .	
$\exists x \forall y P(x, y)$	There is an $x$ for which $P(x, y)$ is true for every $y$ .	For every $x$ there is a $y$ for which $P(x, y)$ is false.	
$\exists x \exists y P(x, y) \exists y \exists x P(x, y)$	There is a pair $x$ , $y$ for which $P(x, y)$ is true.	P(x, y) is false for every pair $x, y$ .	

### Rules of Inference

- 1. Universal Instantiation
  - 2. Universal Generalization
  - 3. Existential Instantiation
  - 4. Existential Generalization
- ▶ All other rules of inference that are valid in propositional logic

### Proof by Contradiction

Recall the definition of validity of arguments: If all premises are true, then the conclusion is also true.

#### Question

Prove that there are infinitely many prime numbers.

#### Proof.

Suppose that there are not infinitely many primes. Therefore there must be finitely many primes:  $p_1 < p_2 < \cdots < p_n$  and hence a largest prime  $p_n$ . Let

$$m=\prod_{1\leqslant i\leqslant n}p_i+1$$

By our assumption, m is not prime. So there exists  $p_j$  such that  $p_j|m$ , i.e.  $m=p_jk$  for some integer k. But now,

$$1 = p_j \left( k - \prod_{1 \leqslant i \leqslant n} p_i \right)$$

which shows that  $p_j|1$ . This is a contradiction. Therefore, we can conclude that there are infinitely many primes.

### Sets

### **Definition** (P48,P51)

- collection of objects
- ignore order
- ignore repetitions

Express Sets with Predicates:  $X = \{x | P(x)\}$  *i.e.*  $x \in X$  iff P(x) **e.g.** 

Suppose  $A = \{x | A(x)\}, B = \{x | B(x)\}, C$  are sets,

- $\forall x \in A(A(x) \land B(x)) \Leftrightarrow A \subseteq B \Leftrightarrow (A(x) \Rightarrow B(x))$
- $ightharpoonup \exists x \in A(A(x) \land B(x)) \Leftrightarrow A \cap B \neq \emptyset$
- $C = \{x | \neg A(x)\} = A^c$

The examples above may help you understand the relation between sets and predicates better.

Sets

#### **Definitions**

- 1. empty set (P49)
- 2. equality of two sets (P50)
- 3. (proper) subset (P50)
- 4. cardinality (P52)
- 5. powerset (P52)
- ▶ Empty set  $(\emptyset)$  is subset of any set.
- $A \subseteq X \equiv A \in \mathcal{P}(X)$
- For any finite set X,  $|\mathcal{P}(X)| = 2^{|X|}$

e.g.

Let  $A = \{\emptyset, \{\{\emptyset\}\}\}, B = \{\emptyset\} \text{ and } C = \{\{\emptyset\}\}.B \subseteq A, \text{ but } B \notin A, \text{ and } C \in A, \text{ but } C \nsubseteq A.$ 

## Operations on Sets (P53-P54)

### Definitions

- 1. union
- 2. intersection
- 3. difference
- 4. complement
- 5. disjoint

# Complex Operations on Sets Suppose *A*, *B*, *C* are sets,

- $ightharpoonup A \cap (B \cup C) = (A \cap B) \cup (A \cap C)$
- $A \cup (B \cap C) = (A \cup B) \cap (A \cup C)$
- $(A \cup B) \setminus C = (A \setminus C) \cup (B \setminus C)$
- $(A \cap B) \setminus C = (A \setminus C) \cap (B \setminus C)$
- $ightharpoonup A \setminus (B \cup C) = (A \setminus C) \cap (B \setminus C)$
- $A \setminus (B \cap C) = (A \setminus C) \cup (B \setminus C)$
- $\triangleright$   $A \setminus B = B^c \cap A$
- $(A \setminus B)^c = A^c \cup B$

Use Venn Diagrams to help understand.

Sets

## Operations on Sets (P55)

**e.g.** For a finite number  $n \in \mathbb{N}$  of sets  $A_0, A_1, \dots, A_n$ :

$$\bigcup_{k=0}^{n} A_k := A_0 \cup A_1 \cup \cdots \cup A_n \qquad \bigcap_{k=0}^{n} A_k := A_0 \cap A_1 \cap \cdots \cap A_n$$

If *n* extends to  $\infty$ ,

$$x \in \bigcup_{k=0}^{\infty} A_k : \Leftrightarrow \exists x \in A_k \qquad x \in \bigcap_{k=0}^{\infty} A_k : \Leftrightarrow \forall x \in A_k$$

Sets

## Ordered Pairs & Cartesian Products (P57-P58)

#### **Definitions**

- 1.  $(a,b) := \{\{a\}, \{a,b\}\}$
- 2.  $(a,b) = (c,d) \Leftrightarrow (a=c) \land (b=d)$
- 3. Cartesian product of two sets  $A \times B := \{(a, b) | a \in A \land b \in B\}$ .
- 4. ordered *n*—tuple & *n*—fold Cartesian product

#### Question

How to express ordered n-tuple with sets?

- ► Epimenides Paradox
- ► Barber Paradox (Russell's Paradox)

#### Russell's Paradox:

#### **Theorem**

Sets

The set of all sets that are not members of themselves is not a set. i.e.

$$R := \{x | x \notin x\}$$
 is not a set.

#### Proof.

The proof is by contradiction. Suppose that R is a set. If  $R \in R$ , then  $R \notin R$  by the definition of R, which is a contradiction. If  $R \notin R$ , then  $R \in R$  by the definition of R, which is also a contradiction.

### Exercises

- 1. Determine whether  $(\neg p \land (p \rightarrow q)) \rightarrow \neg q$  is a tautology.
- 2. Determine whether  $(\neg q \land (p \rightarrow q)) \rightarrow \neg p$  is a tautology.
- 3. Show that  $(p \to q) \land (q \to r) \to (p \to r)$  is a tautology.
- 4. Show that  $(p \lor q) \land (\neg p \lor r) \rightarrow (q \lor r)$  is a tautology.
